

Call for Participation

[The 2009 Workshop on Component-Based High Performance Computing \(CBHPC 2009\)](#)

15-16 November 2009

Portland, Oregon, USA

Collocated with the [22nd Supercomputing Conference \(SC09\)](#)

Following the success of past [HPC-GECO and CompFrame workshop series](#), the fourth installment of the workshop, CBHPC 2009, aims to bring together the developers and users of such technologies, and to build an international research community around these issues. This year's workshop focuses on the role of component and framework technologies in high-performance and scientific computing, and on high-level, component-based and innovative programming tools and environments to efficiently develop high performance applications and exploit them both on individual massively parallel systems and on the Grid.

Advanced Program

This year's workshop features a keynote address, two panel discussion sessions and presentations from 9 full papers and 9 extended abstracts. [An advanced program is available online.](#)

Registration

Participants of CBHPC2009 must register for either the full SC09 Technical Program or the workshop pass to attend. Please see the [SC09 registration web page](#) for details and to register.
